## Application Structure

The folder consists of the following key files and directories:

- app.js: The main entry point for the application, responsible for routing and rendering components.
- global.css: Global CSS styling for the application.
- pages/HomeV1.js: The component representing the Home Page.
- pages/HomeV1.css: Styling rules and styles specific to the HomeV1 component

## HomeV1.js

Description: The HomeV1 component represents the content and layout of the Home Page.

Key Features:

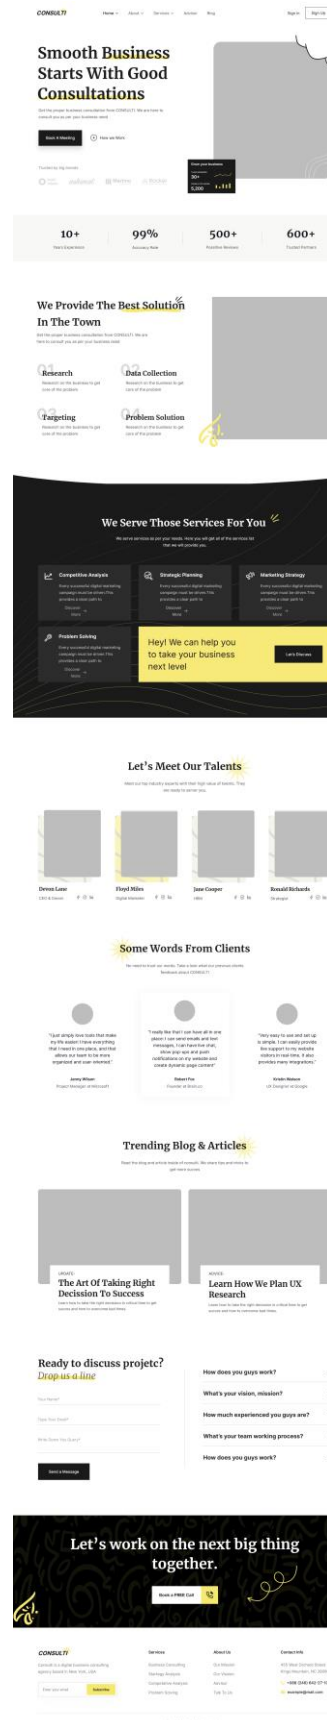

Displays banner images and text.

Provides information about the business and its services.

Features client logos and statistics.

Includes testimonials and contact information.

# Screenshot

The screenshot of the Home Page provides a visual representation of the page's layout and components.

## Usage

To run the application, follow these steps:

Install Node.js and npm.

Clone the project from the repository.

Navigate to the project directory.

Run the following commands:

```
npm install
```

```
npm start
```

This will start the development server, and you can access the Home Page in your browser.

## Conclusion

This documentation provides an overview of the Home Page application, its structure, components, and usage instructions
